Exceptional protection from people who understand your profession.

Founded in 1980 by a small group of dentists, TDIC continues to deliver on its promise to protect only dentists. Our success is due in no small part to the collective strength of our company, focus of our board and the trust of our policyholders in the 15 states we’ve grown to serve.

It’s our privilege to support a community of dentists who are engaged in the bright future of their profession.

Protecting dentists. It’s all we do.®

Dental Association
YOU MAY HAVE HEARD ABOUT THE PILOT projects overseen by the Oregon Health Authority and wondered what they are all about. I am writing to provide a brief summary of the history of these pilot projects.

There was a great amount of discussion on the national level around 2008, being driven by some national foundations and public health organizations. The concern was in follow up to the 2000 Surgeon General’s Report on Oral Health in America. The focus became all about access to care. Access is a multifactorial issue, but discussions soon focused on mid-level providers, which led to the proposal of dental therapists, who are employed in several other countries around the world.

The Oregon Oral Health Coalition (OrOHC) was finalizing a proposal to allow dental therapists to practice in Oregon in 2010, and legislative leadership in Salem was ready to introduce legislation for the 2011 legislative session. This big step followed on the heels of Minnesota, which adopted dental therapy legislation in 2009. The Alaska Native Tribal Health Consortium (ANTHC) began utilizing dental therapists to treat Alaska natives in 2005. It looked like Oregon was next in line.

Because Dr. Teri Barichello and I had participated in the Boston Group, a series of national educational discussions about dental therapists, in 2010, we had concerns about how dental therapy would actually work in the U.S. and, more specifically, here in Oregon. Because of these concerns, we, the ODA, agreed to sit down with a professional mediator and representatives from OrOHC to create legislation for the 2011 session. State legislature leaders assured us that there would be a bill on oral health adopted in 2011, and a dental therapy bill was the default if we could not agree to an alternative plan.

There was no actual U.S. experience of dental therapists except in Alaska, where they were limited to tribal clinics with very different geographic and demographic challenges than we have in Oregon. After lengthy discussions in 2010 and 2011, we agreed that the point of this legislation was access to care, and we created a mediation workgroup called the Access to Care Workgroup.

To make a long story short, we ultimately agreed to the language of SB738-2011, which allows for the testing of innovations to address access to dental care in Oregon through the use of 3-5 year pilot projects. We felt that by doing this testing, we could evaluate different models of delivering care in Oregon before adopting legislation to allow for one or more of the following: teaching new skills to existing categories of dental personnel, developing new categories of dental personnel, accelerating the training of existing categories of dental personnel, or teaching new oral health care roles to previously untrained persons. The pilot projects were also required by SB738-2011 to operate for 3 to 5 years or a sufficient amount of time to evaluate the validity of the pilot project, and evaluate quality of care, access, cost, workforce, and efficacy.

We have been very attentive to getting good metrics in assessing the outcomes of these pilot projects. We are also attentive to the pilot projects’ intended goal to focus on providing care to populations that evidence has shown have the highest disease rates and the least access to dental care.

There are currently two pilot projects in progress. Pilot Project 100 is utilizing a dental therapist in Tribal Dental Clinics. Pilot Project 200 is using EFDHs to place interim treatment restorations. Both are working under the supervision of a dentist.

When evaluating these pilot projects, we want to make sure that we are not creating a two-tier dental care system where one demographic receives lower-quality care than another demographic. We also want to make sure that dental therapy increases access for populations who are not getting care now, instead of continuing to provide care to those already being cared for. These two areas — along with the others specified in SB738 — will be our focus as we determine what the pilot projects have taught us. Stay tuned.

By Dr. Rick Asai

Why Are Thousands of Doctors Trusting OMNICHROMA?

“OMNICHROMA is GROUNDBREAKING—a win-win for all offices. No need to stock 30 composite shades that expire and take up space. So economical and it works great!”

- Dr. Peter Auster

“OMNICHROMA has all the features you need from handling, strength, polishability, and, most importantly, it matches all the tooth shades. This is my go-to composite from the simplest to the complex... The result speaks for itself.”

- Dr. Allan Mohr

Innovated to color-match like you’ve never seen before, Tokuyama’s unique dental composite matches every shade from A1 to D4 with just one shade of composite. By streamlining the restorative process, OMNICHROMA simplifies day-to-day dentistry and saves you time and money.

*Limit one sample kit per doctor. While supplies last. Offer valid until 12/29/20. Please allow 4-6 weeks for delivery. For evaluation purposes only. Participating doctors or dentists are obligated to properly report and reflect any bonus or product incentives they receive on their submissions to Medicare, Medicaid, state or federally funded healthcare program or private insurance.
Board Meeting Highlights

Friday, September 27, 2019

• Molly Bordonaro, Dr. Mark Jensen, George Passadore, and Dr. William Ten Pas were appointed to a four-year term on the Board of Moda Holdings Group.

• The Board began its 2020-2022 strategic planning process, facilitated by Steve Swafford from Leadership Outfitters.

• The Board approved additional funding to support the transition to a new registration provider for the 2020 Oregon Dental Conference.

• The Board reviewed and approved the retention of the ODA Investment Policy.

• Dr. Rick Asai and Dr. William Ten Pas were appointed to serve additional terms on the Dental Foundation of Oregon Board of Directors.

Dental Therapy
By Jen Lewis-Goff and Conor McNulty

What is it?
Dental therapy is a new mid-level provider type model with a scope of practice typically between a hygienist and a dentist. There are different models or versions of dental therapy, and not all are the same. Different models require different education requirements, different authorized scope of practices, different supervision requirements, etc.

Is a dental therapist to dentistry the same as a nurse practitioner is to medicine?
Some equate a dental therapist to a nurse practitioner in medicine; however, that is a false equivalent as the standards and training for dental therapy vary so much. Additionally, most dental therapy models allow the provider to perform non-reversible surgical procedures, which is not comparable with a nurse practitioner.

What's the difference between a DHAT and a DT?
A DHAT, or dental health aide therapist, is based on an Alaska model, which trains its students in two years to do a wide range of dental services from preventative care to extractions. The DHAT does not usually have additional education or training in dentistry aside from those two years.

Most other dental therapy models combine additional dental therapy training with a hygiene curriculum — essentially upscaling a dental hygienist.

As noted above, no two models of dental therapy are the same, with various educational and scope differences.

Is there a national movement on dental therapy?
There has been a recent concentrated effort, funded primarily by big think tanks like Kellogg and Pew, to pass legislation in states authorizing dental therapy. Despite this effort and dental therapy legislative authorizations in other states, there are very few practicing dental therapists in the country and no CODA-approved dental therapy education program.

What is Oregon doing on dental therapy?
Oregon began legislative discussions about a dental therapy model back in 2010. The negotiated outcome was SB 738 in the 2011 Legislative Session, which allows models to be tested in a pilot project process through the Oregon Health Authority. The pilot project process was intended to test and evaluate proposed new provider types in a controlled environment, ensuring patient safety, quality of care, and the collection of data by which to evaluate the model and its efficacy in Oregon.

There are currently two dental pilot projects operating in Oregon:
1. Pilot Project #100 is the usage of a DHAT in tribal clinics.
2. Pilot Project #200 adds Interim Therapeutic Restorations (essentially scoop and fill) to hygienists’ scope of practice.

A proposed Pilot Project #300 would test out a Minnesota-like dental therapy program, utilizing hygienists and adding dental therapy skills to their scope of practice.

Future Legislative Sessions
Oregon may see dental therapy legislation introduced as early as the February 2020 Legislative Session. Stay tuned for additional information, details, and engagement alerts.

Questions? Comments on dental therapy? Send them ODA Government Affairs Director, Jen Lewis-Goff at jlewis-goff@oregondental.org.

Central Oregon Dental Society
Clackamas County Dental Society

The Clackamas County Dental Society is organized to function as a component society of the Oregon Dental Association. Its mission is to encourage the improvement of the health of the public, to promote the art and science of dentistry, and to encourage dental education and camaraderie. The following activities were organized to accomplish this mission.

The theme for this year’s CE courses is maintaining a healthy dental practice. We first covered the security of office electronic equipment to protect your information from ransomware, form grabber, scareware, onion routing, and root kit. We will hear from the ODA’s Wellness Initiative about the Wellness Ambassadors armed with resources to help support colleagues dealing with wellness issues.

A lecture on ergonomics will be presented for the entire dental team to be sure proper posture keeps the physical body healthy. A lecture on functional medicine will help practitioners keep their own body healthy and introduce a new philosophy of helping our patients maintain good health. All who attend our CE meetings have great opportunities for networking with other members and find a place to discuss common practice issues.

In November 2018, Clackamas County built the Veterans Village complex. This was designed to provide a temporary safe living place for 15 homeless veterans. Many volunteer groups are helping to provide things needed for these veterans to have a normal living environment.

Clackamas County Dental Society took on the responsibility for the dental health of these vets. The Comfort Care dental van was used to take X-rays and examine six of the veterans who indicated they had some dental problems.

This is an example of the oral condition of one of the vets we examined. Multiple abscessed teeth, missing teeth, and advanced periodontal disease. Thousands of dollars of dental treatment was provided to these veterans by volunteer dentists in CCDS.

On the national level, a number of CCDS members are giving their time away from their dental practice to provide leadership at the ADA level. Members from the local level work with the tripartite organization to advance the art and science of the dental profession.

Marion & Polk Dental Society

What do you consider to be your component’s greatest strengths?

I believe our greatest strength is that we listen to our members and solicit their feedback to ensure we provide high-quality, relevant continuing education to our members that is local and provided almost every month.

We have also been able to keep costs down for our members. Our component dues have not changed in over five years.

What unique member benefits does your component offer to your local member dentists?

Being able to keep our costs down for members allows them to attend CE and pay our local member dues at low rates, even when everything else continues to increase in costs.
The Multnomah Dental Society encourages the improvement of the health of the public, to promote the art and science of dentistry and to encourage dental education. We are here to serve our members and the public with valuable oral health information, advocacy, and resources.

Dentist members as well as nonmembers are encouraged to take advantage of our continuing education courses as well as social events throughout the year. Two of our list, Salem Boys & Girls Club, Community Connect, Medical Teams International, Neighborhood Dentist, and Salem Free Clinic. MPDS has also held their own successful Dental Day in 2013 and MOM in 2014.

MPDS has proudly offered a Dental Assisting Scholarship for over 20 years to a Chemeketa student. We believe in helping a local student by promoting education and providing assistance to an enrolled student of the Dental Assisting Program at Chemeketa Community College. The scholarship is used to help defray their tuition costs and other fees after meeting certain criteria.

Does your component put on any special events for your local members or community you would like to highlight?
Marion & Polk Dental Society members participate in many charitable efforts as well as community outreach. To name a few, but this certainly doesn’t complete our list, Salem Boys & Girls Club, Community Connect, Medical Teams International, Neighborhood Dentist, and Salem Free Clinic. MPDS has also held their own successful Dental Day in 2013 and MOM in 2014.

What do you consider to be your component’s greatest strengths?
Southern Oregon Dental Society’s greatest strengths are the opportunities to network with dentists throughout our community. In addition, we provide a wide variety of continuing education opportunities throughout the year; most are free to SODS members.

What unique member benefits does your component offer to your local member dentists?
SODS offer quarterly drawings for members who attend our events, both social and continuing education events. In August, we gave away an Apple Watch to Dr. Pam Ortiz at our Summer Picnic. Our current raffle is for a $250 Amazon gift card, which we will give away at our Christmas Party, December 13th. For every event a member attends, they earn an additional drawing entry.

Does your component put on any special events for your local members or community you would like to highlight?
Southern Oregon Dental Society is excited to bring Dr. David Hornbrook to Medford May 8, 2020.
3.0 mm Implants:  
A great option for limited space, but not without limitations

When an implant needs to go into a narrow edentulous space, a 3.0 mm implant might be the perfect solution. 3.0 mm implants are offered by several companies, including:

- Nobel Biocare™
- Straumann®
- Dentsply Sirona
- BioHorizons®
- And many others

However, there are limitations to these implants. Here is what you need to consider when working a 3.0 mm implant into a treatment plan.

**Limited Positions**
The first and perhaps most important limitation is that all 3.0 mm implants on the market are only indicated for maxillary lateral incisors and mandibular central and lateral incisors. Placing a 3.0 mm implant in any other position may void the implant warranty.

The good news is there are some options available for other positions with limited space. For example, at just 3.1 mm, the Zimmer Biomet Eztetic™ implant is indicated for all positions except the molars. Unfortunately, custom abutments are not available for the Eztetic implant, which can be a significant drawback.

**Limited to Non-Splinted Single Units**
Some manufacturers restrict 3.0 mm implants to non-splinted single units. This is the case for both Straumann and Nobel Biocare.

**Limited Restorative Components**
Finally, 3.0 mm implants offer a smaller selection of restorative components.

- Although Straumann and BioHorizons do offer zirconia abutments, the minimum thickness requirements of those abutments often make them too large to fit in the available space.
- UCLA abutments are not available for the Astra and Straumann systems. This means that labs cannot fabricate traditional screw-retained crowns or cast gold abutments for these implants. However, it is still possible to do screwretention style crowns.
- Bothstock and custom titanium abutments are available for all the 3.0 mm implants. However, there are no custom abutments currently available for the Eztetic 3.1 mmD implants from Zimmer Biomet.

As you can see, it is important to keep these limitations in mind when you consider a 3.0 mm implant as part of your patient’s treatment plan. It will be important to determine the desired restorative outcome before implant selection.

We hope you found this article helpful. If you have any questions about the many implant options available, feel free to contact us at implants@obriendentallab.com. We’re always happy to review treatment plans with you so that you can determine the best course of action for your patient. CONGENITALLY MISSING LATERAL INCISORS ARE A FAIRLY common condition that may be either unilateral or bilateral and often presents restorative challenges. Some of the treatment options that exist for this clinical situation are: a removable appliance, space opening with bridges (conventional and winged, 3-unit and 2-unit cantilever), space opening with implant-supported crowns at the appropriate age, and space closure with canine substitution. An interdisciplinary approach is key to arriving at the appropriate treatment plan with collaboration between the orthodontist, surgeon, and restorative dentist ideally beginning at an early age. Regardless of the restorative option selected, there are both advantages and disadvantages that must be discussed and addressed prior to beginning treatment. A desirable treatment plan would be one that achieves the aesthetic and functional goals of the case while preserving as much healthy tooth structure as possible. The following case illustrates the treatment of a patient with congenitally missing lateral incisors who at an early age had been treated with canine substitution and composite bonding to simulate laterals and was now seeking a more aesthetic option.

The advantage of canine substitution in these types of cases is that it’s not necessary to prepare teeth for bridges (even conservative winged design) or maintain spaces and bone levels until the patient is old enough to have implant-supported crowns placed. The disadvantages of canine substitution are that canines are darker and larger than laterals, they have a bulky canine eminence instead of a flat facial contour, and the gingival height is more apical than that of a lateral. Also, the gingival height of the first premolar which must occupy the canine position is more coronal than the canine, creating more gingival asymmetry. It should be noted that canine substitution could be contraindicated in some cases, and therefore winged bridges and implant-supported crowns would be acceptable treatment options. The specific problems in this case that needed to be addressed included: gingival asymmetry, tooth proportions, excessive negative space, and a flat smile arc (Figures 1-4). Additionally, the patient was unhappy with the color of her teeth and wanted a whiter, brighter smile. She had inquired about and was interested in porcelain veneers, and while an acceptable result could be achieved with veneers only, there would be some compromise to ideal gingival symmetry and tooth proportions. With that in mind and in order to achieve the most aesthetic result possible, the agreed-upon treatment plan called for orthodontic extrusion of the canines and intrusion of the premolars to correct the gingival asymmetry, narrowing of the canine width for better tooth proportions, and 10 porcelain veneers to decrease negative space, improve the flat smile arc, and to change the shape of the canines to laterals, the first premolars to canines, and the first molars to second premolars. Furthermore, the shade of the porcelain would give the patient the whiter, brighter smile she desired.

By Thomas Dudney, DMD

PHOTOS BY DR. THOMAS DUDNEY.
Before orthodontic treatment began, the canines were reduced mesially, distally, and facially to approximate the size of the laterals and to make it easier for the orthodontist to position them properly. Bracket placement allowed the orthodontist to extrude the canines and thus move the gingival margins in a coronal direction and intrude the premolars moving the gingival margins in an apical direction (Figure 5-7). After the ortho was completed, the patient was ready for veneer preparation. The mesial buccal cusp of the first molars and the second premolars were prepared with a chamfer finish line and little or no facial reduction so the restorations could simulate second and first premolars respectively and could be built out facially to decrease negative space in the buccal corridors. The first premolars were prepared facially and lingually (removing the lingual cusp) so the restorations could simulate a canine, and the canines (in the lateral position) having already been adjusted prior to ortho, were minimally prepared so the restoration would be the ideal size and shape of a lateral incisor. After impressions, the provisional restorations were fabricated utilizing a putty matrix made from the diagnostic wax-up. Provisionals are critical to the success of the case because they allow the patient to preview the final result and offer feedback; they allow the dentist to evaluate aesthetics, function, and phonetics; and, once approved by the patient, they provide a blueprint for the laboratory to follow when fabricating the final restorations. In addition to pictures and an impression of the temporaries, the following information was sent to the lab: material selection (in this case e.max Press lithium disilicate), shade of the prepared teeth, length of centrals, bite registration, stick bite, impressions, opposing model, and final shade (BL 2/BL3). At the seat appointment, the definitive restorations were tried in to evaluate fit and contacts, and, after isolation with a rubber dam, all 10 were bonded in at the same time with a universal adhesive and light cure resin cement. After clean-up, the occlusion was checked and the restorations were polished.

The patient returned in one week for a post-op follow-up appointment, at which time she stated that she was very pleased with the appearance of her smile (Figures 8-10). This case illustrates the benefits of an interdisciplinary approach to treatment planning difficult cases and the importance of communication with the right dental lab in achieving the desired aesthetic results. Patient satisfaction would not have been possible without the efforts and talents of Gary Vaughn and the entire team at Corr Dental Lab.
OUR NON-PROFIT DENTAL CLINIC is a little different from most clinics in the Portland, Oregon area. An 1,800-square-foot facility, Gateway Grace Clinic sits west of Portland Adventist Community Services (PACS) in a newly renovated space that used to house an acupuncture clinic. Gateway Grace Clinic is in the business of saving teeth!

“Gateway Grace Clinic is here to serve uninsured adults who fall between the cracks of not qualifying for Oregon Health Plan and who are unable to pay for private dental insurance. Our clinic has a unique $20/visit dignity-pay, and a patient can receive some much-needed care,” said Dr. Robert Stafford, ODA member and Gateway Grace clinical director. The clinic sees patients who are uninsured and make less than 300% of the Federal Poverty Level. These patients have difficulty paying for dental care but make too much to qualify for the Oregon Health Plan, which limits income to 139% of the Federal Poverty Level. We have already seen patients who have not had access to oral hygiene instructions, regular cleanings, or a clinic where crowns and root canals can be done.

“Our vision and mission at this clinic is to be able to save teeth, restore smiles, love people like Jesus, and give patients a hope and future beyond anything they could ever imagine,” said Carol James, dental clinic manager.

The clinic has been open since September 17, 2019, operating with two volunteer dentists and two paid staff. We have seen 33 new patients since the opening. We are always in need of more volunteer dentists. For us to be open three days a week, we would need 12 dentists.
Another Gateway Grace Clinic volunteer, Dr. Erina Lee, says, “Prior to graduating dental school 12 years ago, I knew that I wanted to work in a place that was service-oriented, helping our underserved population. Volunteering at Gateway Grace Clinic has been fulfilling because I get to see patients who already come in with a sense of gratitude. Although I am providing a service to patients, I also feel like God is giving me a learning experience as well, and I am feeling very grateful for the opportunity to volunteer here.”

Gateway Grace Clinic includes a reception and waiting area, doctor’s office, consultation room, sterilization and X-ray rooms, three operatories, a break room, two restrooms, and two rooms that are planned to be used for vision care in the future.

Dr. Stafford said, “It’s extremely satisfying to volunteer in a place where we can provide comprehensive care to a very appreciative group with state-of-the-art equipment.”

This new clinic was not thought of overnight. The vision began in 2001, and fundraising started in 2013. The overall cost was about $700,000, with $300,000 of that just for the building and renovations.

Many churches, donors, and businesses have helped raise funds over the years to make this dream a reality: Prosper Portland, The Oregon Community Foundation, M.J. Murdock Charitable Trust, Kaiser-Providence Clinic Initiative, Vera L. Smith Charitable Foundation, Newberg-based dental manufacturer A-dec, Generations Retirement Communities, Adventist Health Portland, Oregon Conference of Seventh-day Adventists, and two anonymous donors.

Gateway Grace Clinic is part of Portland Adventist Community Services (PACS), which also serves the community with a food pantry, mobile food pantry, and a low-cost thrift store. PACS was founded in 1934 and is affiliated with the Seventh-day Adventist Church. PACS is a faith-based, non-profit organization made up of staff, volunteers, donors, prayer partners, and community partners.

If you are a dentist and would like to join us in serving this community by Saving Teeth and Restoring Smiles, please call 503-907-6768. We would love to partner with you to ensure our patients receive the care they need for their health and dignity.

For more information about Gateway Grace Clinic, call 503-907-6768 or go to www.pacsonline.org/pacs-dental-clinic. We are located at 1424 NE, 109th Ave, Portland, OR 97220.

“Our vision and mission at this clinic is to be able to save teeth, restore smiles, love people like Jesus, and give patients a hope and future beyond anything they could ever imagine,” said Carol James, Dental Clinic Manager.
Get the answers to all your questions concerning your practice and retirement:

- How long will it take to sell my practice?
- What is happening in the marketplace?
- Should I bring in an associate or partner?
- What will my practice sell for?
- How can I maximize the value of my practice?

OHSU School of Dentistry Helping Implement New Oregon Vaccination Law

160 dental students trained on vaccines, give each other & faculty flu shots

By Franny White, OHSU Strategic Communications

THE OREGON HEALTH & SCIENCE UNIVERSITY SCHOOL OF DENTISTRY is helping Oregon prepare to implement a new state law that will allow dentists to vaccinate their patients starting next year.

As part of the dental school’s first-ever vaccination training, about 100 third- and fourth-year dental students were trained in vaccine science and safety on Friday, Sept. 27. Following the training, the students put their new knowledge to use by vaccinating each other and OHSU dental faculty against the flu virus. OHSU School of Dentistry Dean Phillip Marucha, PhD, DMD, was the first faculty member to receive a flu shot.

Oregon dentists are expected to begin providing vaccine services to their patients in early 2020. They will be able to do so thanks to Oregon House Bill 2220, which Gov. Kate Brown signed into law in May 2019. Marucha partnered with the Oregon Dental Association to draft the bill.

While two other states — Minnesota and Illinois — allow dentists to administer flu vaccines to their adult patients, Oregon will become the first to allow its dentists to provide all vaccines to all patients, including children.

The Oregon Board of Dentistry worked with the Oregon Board of Pharmacy, Oregon Health Authority, OHSU, Oregon Dental Association and others to create rules and procedures needed to implement the law in 2020.
Go Westward, They Said!

Thank you to everyone that joined us at Westward Whiskey on Thursday, October 24th for our 2019 Fall Giving Celebration. Evening highlights included a bottle signing by Westward Whiskey Founder/Distiller Christian Krogstad, who spent the evening with our guests and signed bottles from the family of Westward Whiskey distilled spirits, behind-the-scenes distillery tours, and the very popular mixology classes, where guests learned to make mini-cocktails. We served an array of delicious appetizers from Olympia Provisions, torch-fired artisanal s’mores (an American classic) from 1927 S’Mores Company, relished a visit from the Franz Bakery “Grilled Cheese Machine,” who served hot off the grill and ever-so-yummy grilled cheese sandwiches, along with non-alcoholic beverages including Steven Smith Teamaker.
Special Thanks to Our Community Partners

Thank you to Dr. David J. Dowsett and the staff with Complete Health Dentistry of Portland for their recent and very generous donation in memory of Betsy Burton. Over the summer, Dr. Dowsett hosted the Tooth Taxi at his office, and throughout the day patients were asked to select which charity they would like their dental fees to be donated to: The Dental Foundation of Oregon, The Jerome Kersey Foundation, or The American Foundation for Suicide Prevention. Not only did the DFO share in the financial support to the foundation, but the Tooth Taxi team and Dr. Dowsett’s staff were able to help increase awareness of the need for oral health care throughout Oregon.

Permanente Dental Associates, PC (PDA) and Northwest Permanente Physicians & Surgeons, PC (NWP) recently presented The Dental Foundation of Oregon with $2,000 in support of our mission. For five years now, the PDA Canines soccer team and the MWP’s FC Thrive soccer team have been holding an annual charity match where each side put up $1,000, with the total $2,000 pot donated to the winning team’s charity of choice!

Dr. John J. Snyder, executive director and CEO with Permanent Dental Associates shared, “In the 2019 edition of this rivalry, the PDA Canines won the match 1-0 after finally scoring in the 87th minute following a highly defensive match. As with our victories in 2015 and 2018, PDA has elected this year that the charitable donations should support The Dental Foundation of Oregon and its Tooth Taxi. Thank you for all that you do. Keep your fingers crossed for the Canines in 2020!”

Mark Your Calendar for the 2020 Oregon Dental Conference!

Learn, Grow, Connect
An event for the entire dental team
ON AUGUST 30, 2019, THE ADA
Managing Debt and Wealth program was presented to first-year dental students at Oregon Health and Sciences University by member dentist Alysa D’Ambrosia, DMD, a 2013 OHSU graduate. This program is one in a series of success programs on topics most relevant to students today. The students enjoyed an ODA-sponsored lunch from Elephants Deli while listening to sage advice from Dr. D’Ambrosia, which included examples of financial mistakes she made throughout her dental journey. The success programs are presented at no charge to students or dental schools by the American Dental Association and/or state and local dental societies. The Success program helps students prepare for life as a dentist — good choices now, great dentists later.
ASSOCIATES WANTED

Looking for a Full or Part-time associate dentist to add to our well established growing practice. A great opportunity to practice in a state of the art facility with advanced technology alongside two highly trained clinicians available to mentor if desired. Experience preferred, but interested in all applicants. Please E-mail resume to info@alexadental.com.

Dental practices are increasing in value. However, every practice is unique and needs to be valued in that manner.

I have appraised over 2,100 practices and sold over 475 in the past 30 years. My average sell price is 97% of my appraised value.

If a practice transition is in your future, give the expert a call.
